

PANJAB UNIVERSITY, CHANDIGARH

SYLLABI OF FIRST YEAR COURSES IN B.E. (Electronics and Communications Engineering)

Semester I

S. No	Subject	Code	L-T-P	Credits Theory	Credits Practical	University External Marks	University Internal Marks	Practical Marks Internal	Total Marks
1.	Calculus	MATHS101	4-1-0	4		50	50		100
2.	Introduction to Electronics	EC102	3-0-2	3	1	50	50	50	150
3.	Workshop	ME103	0-0-4		2			50	50
4.	Applied Chemistry	CH101	4-0-3	3	1	50	50	50	150
5.	Communication Skills	HSS102	2-0-0	2		50	50		100
6.	Computer Programming (MATLAB Programming for Engineers) / Computer Programming	EC103 / CS104	2-0-2 / 3-0-2	2	1	50	50	50	150
Total			27 / 28	14	5	250	250	200	700

Semester II

S. No	Subject	Code	L-T-P	Credits Theory	Credits Practical	University External Marks	University Internal Marks	Practical Marks Internal	Total Marks
1.	Differential Equations and Transforms	MATHS201	4-1-0	4		50	50		100
2.	Ethics and Self Awareness	HSS201	2-0-0	2		50	50		100
3.	Physics Course I	-	4-0-3/4-0-2	3	1	50	50	50	150
4.	Introduction to Environment Science	GS201	3-0-0	3		50	50		100
5.	Analog Electronic Circuits – I	EC201	3-0-2	3	1	50	50	50	150
6.	Digital Design	EC203	3-0-2	3	1	50	50	50	150
Total			27/26	18	3	300	300	150	750

SEMESTER I

Paper Title : Calculus
Paper Code : MATHS101

Pre Requisite : 10+2

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Course Duration: 45 lectures of one hour each.

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objectives

- To understand the behaviour of infinite series and its use.
- To learn the concepts of functions of two and more than two variables and their applications.
- To learn the methods to evaluate multiple integrals and their applications to various problems.
- To understand the concepts of Vector calculus and their use in engineering problems.

S. No.	Topic	No. of Lectures
	PART A	
1.	FUNCTIONS OF ONE VARIABLE Sequences and Series: Sequences, Limits of sequences, Infinite series, series of positive terms, Integral test, Comparison test, Ratio test, Root test. Alternating series, Absolute and Conditional Convergence, Leibnitz test. Power series: radius of convergence of power series, Taylor's and Maclaurin's Series, Formulae for remainder term in Taylor and Maclaurin series, Error estimates. (Scope as in Chapter 8, Sections 8.1 – 8.10 of Reference 1). Integral Calculus: Areas of curves, Length of curves, Volume and surface areas of revolution (Scope as in Chapter 5, Sections 5.1, 5.3, 5.5, 5.6 of Reference 1).	9
2.	DIFFERENTIAL CALCULUS OF FUNCTIONS OF TWO AND THREE VARIABLES Concept of limit and continuity of a function of two and three variables, Partial derivatives, total derivative, Euler's theorem for homogeneous functions, composite function, differentiation of an implicit function, chain rule, change of variables, Jacobian, Taylor's theorem, Errors and increments, Maxima and minima of a function of two and three variables, Lagrange's method of multipliers (Scope as in Chapter 12, Sections 12.1 – 12.6, 12.8 – 12.9 of Reference 1).	9

3.	SOLID GEOMETRY Cylinder, Cone, Quadric surfaces, Surfaces of revolution. (Scope as in: 10.6, 10.7 of Reference 1).	3
PART B		
4.	INTEGRAL CALCULUS OF FUNCTIONS OF TWO AND THREE VARIABLES Double and triple integrals, Change of order of integration, Change of Variables, Applications to area, volume and surface area. (Scope as in Chapter 13 of Reference 1).	9
5.	VECTOR DIFFERENTIAL CALCULUS Vector-valued functions and space curves, arc lengths, unit tangent vector, Curvature and torsion of a curve, Gradient of a Scalar field, Directional Derivative (Scope as in Chapter 11, Sections 11.1, 11.3, 11.4, Chapter 12, Section 12.7 of Reference 1).	8
6.	VECTOR INTEGRAL CALCULUS Line integrals, Vector fields, Work, Circulation and Flux, Path Independence, Potential functions and Conservative fields, Green's theorem in the plane, Surface Areas and Surface Integrals, Stoke's Theorem, Gauss Divergence Theorem (Statements only) (Scope as in Chapter 14 of Reference 1).	7

Outcomes

- The students are able to test the behavior of infinite series.
- Ability to analyze functions of more than two variables and their applications.
- Ability to evaluate multiple integrals and apply them to practical problems.
- Ability to apply vector calculus to engineering problems

Paper Title : INTRODUCTION TO ELECTRONICS

Paper Code : EC102 / EC202

Pre Requisite : 10+2

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Course Objectives:

1. To introduce the field of electronics along with the applications.
2. To understand the fundamental concepts of basic semiconductor devices and digital electronics.
3. To become familiar with basic principle of operational amplifier along with its applications.
4. To make students familiar with the basic concept of Communication System.

**Lecture wise breakup
of Lectures**

No.

Part A

Introduction to Electronics: Evolution of Electronic Devices and Integrated Circuit, Applications of electronics, Need and application of electronics in different areas

(4)

Semiconductor Devices: Concept of active and passive devices, Intrinsic and Extrinsic Semiconductors, conductivity of semiconductors and its temperature dependence, Semiconductor Devices: Structure, principle of operation, characteristics and applications of PN-Junction (Rectifier, Clipper and Clamper), BJT, Current Components in BJT, Input & Output characteristics BJT configurations.

(12)

Digital Electronics I: Number System and conversion, Binary arithmetic, basic and universal logic gates, minimization of Boolean expression using Boolean Algebra and K-map.

(4)

Part B

Digital Electronics II: Concept of flip-flops, RS, D, JK and T types, basic operation of counters and registers, Introduction to RAM & ROM, Basic principle and characteristics of Analog to Digital Converters (ADCs) and Digital to Analog Converters (DACs).

(8)

Operational Amplifier and its applications: Block diagram, characteristics, inverting and non-inverting configurations, Op-amp as summing amplifier, difference amplifier, integrator and differentiator

(8)

Communication Systems: Various frequency bands used for communication, Block diagram of Analog and Digital communication, need of modulation, comparison of Analog and Digital communication systems.

(6) Recommended Books:

1. Integrated Electronics, Millman & Halkias (Mc-Graw Hill)

2. Electronics Devices & Circuit Theory, RL Boylestead & L Nashelsky (PHI)
3. Modern Digital Electronics, R P Jain, Tata McGraw Hill.
4. Electronic Communication Systems, G. Kennedy, McGraw Hill, 4th Edition

Course Name : INTRODUCTION TO ELECTRONICS (Practical)

List of Experiments:

1. Familiarization with electronic components and usage of Multimeter
2. Familiarization with CRO and Signal Generator.
3. To study the V-I characteristics of pn junction diode and determine static resistance and dynamic resistance.
4. To implement clipper and clamper circuits.
5. To plot the characteristics of BJT configurations.
6. To verify Truth Table of different logic gates.
7. To verify Truth Table of different flip-flops.
8. To study Op-amp as summing amplifier.
9. To study Op-amp difference amplifier.
10. To study Op-amp integrator and differentiator.
11. A project related to implementation of application based Electronic Circuit on a general purpose PCB.

Paper Title: Workshop Practice

Paper Code: ME 203 / ME103

Time of examination: 3hrs.

Internal Assessment : 50

Course Prerequisites: Basic Workshop Practices

**Course
Objective
s(CO) :**

Student will be able to:

- 1. Know different machines, tools and equipment, Identify different Engineering materials, metals and non-metals.**
- 2. Understand different Mechanisms, Use of Machines, Tools and Equipment.**
- 3. Knowledge of basic Manufacturing Processes in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal.Smithy, Foundry and Carpentry Workshops.**

**Course
Outcome
:**

This course is designed to help students achieve the following outcomes.

- 1) Familiarity with common machines, Tools and Equipment in basic Workshop Practices.**
- 2) On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal. Smithy, Foundry and Carpentry Workshops in Engineering professions.**
- 3) Applications of Basic Workshop Practices..**

SYLLABUS

8u98

Instruction for Students: The candidate will be attending a laboratory session of three hours weekly.

Practice of basic exercises related with different shops. On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal. Smithy, Foundry and Carpentry Workshops in Engineering professions.

Welding Workshop : (Theory)Joining Processes, Welding and its Classification, Welding Processes, Fusion Welding, Pressure Welding, Electric Arc Welding, Gas Welding, Resistance Welding, Metal Inert gas Welding, Welding Joints, Welding Positions, Welding defects, Welding Applications, Basic welding design and Procedures, identification of materials,

Jobs: Butt Joint in Flat Position using SMAW.

Lap Joint using Spot Welding

Edge Joint in Horizontal Position using SMAW

Tee Joint in Flat position using SMAW

Corner Joint in vertical position using SMAW.

Defect Identification and marking.

Edge preparation and Fillet making, Tacking, Distortion identification

Electronics Workshop : To know about Soldering mechanism and techniques

Familiarity with Electronic Components / symbols

Testing of electronic components

Application of Soldering : Circuit Assembly

List of Jobs :

Practice of Soldering and de-soldering

Identification and testing of a) passive electronic components b) Active electronic components

Assembly of Regulated Power supply circuit

Electrical Workshop:

Introduction of Various Electric wirings, Wiring Systems, Electrical wiring material and fitting, different type of cables, Conduit pipe and its fitting, inspection points, switches of all types, Distribution boards, M.C.B's etc.

Electric Shock and its management.

Electric Tools: Conversance with various tools and to carry out the following:

- a) Measurement of wire sizes using SWG and micrometer
- b) Identification of Phase and neutral in single phase supply

Jobs:

To control a lamp with a single way switch

To control a lamp from two different places

To assemble a fluorescent lamp with its accessories

To control a lamp, fan and a three pin socket in parallel connection with single way switches

Fitting Shop:

Introduction of Fitting, different type of operations, Tools, materials, precision instruments like Vernier caliper and Micrometer etc,

Safety precautions and Practical demonstration of tools and equipments

Jobs: To make a square from MS Flat, Punching, Cutting, Filling techniques and practice, Tapping, Counter Drilling

Smithy Workshop:

Introduction of Smithy and Forging process, Tools and Equipment's, Operations, Heat Treatment processes, Advantages, Dis-advantages, Defects and Safety precautions.

Jobs: Drawing and Upsetting Practice using Open Hearth Furnace.

Cold working process practice

Heat Treatment \: Annealing and hardening process

Machine Shop : Application, Function and different parts, Operations of Lathe, Type of Cutting Tools and their materials, Drill machine Types, applications and Functions. Hacksaw machines and functions, Work Holding devices and tools, chucks, Vices, machine Vices, V Block, Measuring Instruments uses, Shaper and Milling machine Applications.

Jobs: To perform Marking, Facing, Turning, taper Turning, Grooving, Knurling, parting, Drilling, Reaming operations on lathe machine,

Hacksawing practice on Power hacksaw,

Shaping operation practice on Shaper

Carpentry Shop: Classification of Tree, Timber. Advantages and uses of Timber, Seasoning of Wood, Tools Used, Defects and Prevention of Wood,

Jobs:

Tee Joint

Cross Joint

Tenon Joint,

L Shape Joint

Practice of Wood Working Lathe

Practice on multi-purpose Planer

Foundry Shop : Introduction to Foundry, Advantages and Disadvantages of castings process, Introduction to pattern and various hand tools, Ingredients of Green sands, Various Hand Molding processes, Introduction to Casting Defects,

Jobs: Identification and uses of hand tools, Preparation of Green sand in Muller, Preparation of Sand Mould of Single piece solid pattern, Split pattern, Preparation of Green sand Core, casting of a Mould and study its defects.

RECOMMENDED BOOKS

	NAME	AUTHOR(S)	PUBLISHER
1.	Introduction to Basic Manufacturing Processes and Workshop Technology	Rajender Singh	New Age International Publication
2	Manufacturing Processes	Chapman	Viva Books Private Limited

Paper Title : Applied Chemistry

Paper Code : CH101 / CH201

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objective: To teach fundamentals of basic chemical sciences essential for the development of new technologies to all branches of engineering.

Details of the Course:

S. No.	Contents	Contact hrs
	PART A	
1.	THERMODYNAMICS: Review of objectives and limitations of chemical thermodynamics, State functions, Thermodynamic equilibrium, work, heat, internal energy, enthalpy, heat capacity. Zeroth law of thermodynamics, First law of thermodynamics Reversible, isothermal and adiabatic expansion & compression of an ideal gas. Irreversible isothermal and adiabatic expansion of an ideal gas. Carnot cycle and efficiency of reversible engines, Enthalpy change and its measurement. Flame temperature, Second and third law of thermodynamics. Concept of entropy. Gibb's and Helmholtz equations. Simple numerical for calculating w , q , ΔE , ΔH and entropy.	10
2.	CATALYSIS: Catalysis and general characteristics of a catalytic reactions, homogeneous catalysis, kinetics of acid, base and enzyme catalysis – Michaelis-Menten equations. Heterogeneous catalysis. Application of catalysis for industrially important processes—hydrogenation (Wilkinson's catalyst), hydroformylation, acetic acid process and Wacker process.	6
3.	ELECTROCHEMISTRY: Introduction to electrochemistry, types of electrodes, Ion selective electrodes, Reference electrodes, Fuel cells (hydrogen-oxygen, propane-oxygen, methanol-oxygen fuel cells), Corrosion: Types of corrosion, dry and wet corrosion and their mechanisms, types of electrochemical corrosion (galvanic, pitting, waterline, differential aeration, soil, microbiological, inter-granular, stress corrosion), Factors influencing corrosion, Prevention of corrosion.	8
	PART B	
4.	POLYMER CHEMISTRY: Classification of polymers, Mechanism and methods of polymerisation, idea of number average and weight average molecular masses of polymers, preparation, properties and uses of polystyrene, polyester, polyamide, phenol-formaldehyde, silicones and epoxy resins,	5
5.	SPECTROSCOPY: UV- Introduction, Lambert-Beer's Law, selection rules, electronic transitions, Application to simple organic molecules (auxochrome, chromophore), effect of conjugation and solvent on	10

	transition of organic molecules, Woodward-Fieser Rules for calculating λ_{max} for dienes. IR- Introduction, Principle of IR spectroscopy-Fundamental vibrations, Application to simple organic molecules (effect of masses of atoms, bond strength, nature of substituent, hydrogen bonding on IR frequency), sample preparation for IR.	
6.	COORDINATION CHEMISTRY: Introduction, Crystal Field Theory, Splitting of octahedral, tetrahedral and square planar complexes, crystal field stabilization energies of octahedral and tetrahedral complexes and its applications.	6

Books suggested:

1. Organic Chemistry by Joseph M. Hornback Brooke/Cole Publishing Company U.S.A.
2. Atkin's Physical Chemistry by Peter Atkins, Julio de Paula, 7th Edition, Oxford University Press.
3. Concise Inorganic Chemistry Vth Edition J D Lee 2003 (Chapman & Hall).
4. A Textbook of Engineering Chemistry by Shashi Chawla, Dhanpat Rai & Co. Pvt. Ltd.
5. Introductory Polymer Chemistry by G.S. Mishra, John Wiley & Sons, New York, 1993.
6. Puri, Sharma and Pathania : Principles of Physical Chemistry, W.H. Freeman & Co, 2008.
7. D. S. Pavia, G.M. Lasmpman and G.S. Kriz : Introduction to spectroscopy, 4th Edition, Thomson learning, Indian Edition 2008.
8. Basic Inorganic Chemistry by F.A. Cotton, G. Wilkinson and P.L. Gaus, 3rd Ed., John Wiley & Sons.

Practicals:

Instruction for Students: The candidate will be attending a laboratory session of two hours weekly and has to perform any eight experiments.

- Volumetric analysis: iodometric titrations, complexometric titrations, Acid-base titrations
- Analysis of lubricants: Viscosity/surface tension/saponification value/acid value
- Instrumental techniques for chemical analysis: conductometry, potentiometry, UV-visible/IR spectrophotometer.
- Preparation of few organic compounds/inorganic complexes/polymer

Books Recommended:

1. A. I. Vogel : A textbook of Quantitative Inorganic Analysis, 2000, Published by Longman Gp. Ltd, 4th edition.
2. Shashi Chawla: Essentials of Experimental Engineering Chemistry. Published by Dhanpat Rai & Co. Delhi (2001).
3. Vogel's text book of quantitative chemical analysis, 6th Ed by J. Mendham, R. C. Denney, J. D. Barnes and M. J. K. Thomas, Pearson Education.

Paper Title : Communication Skills
Paper Code : HSS102 / HS202

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Part –A

Lecture Wise Breakup	No. of Lectures
1. Fundamentals of Communication Skills	(02)
Scope and Significance of Communication Skills, Listening, Speaking, Reading and Writing	
2. Writing Skills	(04)
Basics of Grammar – Word Order, Sentence Construction, Placing of Subject and Verbs, Parts of Speech, Use of Tenses, Articles, Prepositions, Phrasal Verbs, Active-Passive, Narration	
3. Vocabulary Building and Writing	(03)
Word Formations, Synonyms, Antonyms, Homonyms, One-Word Substitutes, Idioms and Phrases, Abbreviations of Scientific and Technical Words	
4. Speaking Skills	(03)
Introduction to Phonetic Sounds, English Phonemes, Stress, Rhythm and Intonation, Countering Stage Fright and Barriers of Communication	
5. Reading and Comprehension	(02)

Part –B

Lecture Wise Breakup	No. of Lectures
1. Advanced Communication Skills	(02)
Scope, Significance, Process of Communication in an organization, Types and Levels, Communication Networks, Technical Communication, Tools of Effective Communication	
2. Speaking Skills and Personality Development	(05)
Interpersonal Communication, Presentation Skills, Body Language and Voice Modulation, Persuasion, Negotiation and Linguistic Programming, Public Speaking, Group Discussions, Interviews and Case Studies, Power Point	

Presentations , Relevant to the context and locale, Technical Presentations,
Conducting , Meeting and Conferences

3. Communication and Media (01)

Social and Political Context of Communication, Recent Developments in Media

4. Advanced Techniques in Speaking Skills (02)

Importance of Listening/Responding to native and global accents, Telephonic
Interviews and Video Conferencing

5. Advanced Techniques in Technical Writing (04)

Job Application, CV Writing, Business Letters, Memos, Minutes, Reports and
Report Writing Strategies, E-mail Etiquette, Blog Writing, Instruction Manuals
and Technical Proposals

Practical Sessions

1. Individual presentations with stress on delivery and content
2. Overcoming Stage Fright - Debates, extempore
3. How to discuss in a group - Group Discussion
4. Discussion on recent developments and current debates in the media
5. How to prepare for an Interview and face it with confidence
6. Conducting meeting and conferences
7. Exercises on Composition & Comprehension, Reading Improvement

TEXT BOOKS

1. Ludlow, R. and Panton, F., “The Essence of Effective Communication”, Prentice Hall
2. Quirk, Randolph. and Sidney, Greenbaum., “A University Grammar of English”, Pearson Education
3. Ashraf, M. Rizvi, “Effective Technical Communication”, McGraw Hill
4. Bovee, Courtland L. and John, V. Thill., “Business Communication Today”, Pearson Education

REFERNCE BOOKS

1. Guffrey, Mary E., “Essentials of Business Communication”, South-Western College Publishing
2. Raman, Minakshi. And Sharma, S., “Technical Communication: Principles and Practice”, Oxford University Press
3. Rodrigues, M.V., “Effective Communication”, Himalaya Publishing House
4. McCarthy, Michael. and Felicity O’ Dell., “English Vocabulary in Use”, Cambridge University Press
5. Jones, Daniel., “The Pronunciation of English”, Universal Book Stall

6. Sharma, R.C. and Mohan, K., “Business Correspondence and Report Writing”, Tata McGraw Hill
7. Raman, Minakshi. And Sharma, S., “Technical Communication: Principles and Practice”, Oxford University Press
8. Scott, Bill., “Communication for Professional Engineers”, Thomas Teleford Ltd.
9. McMurrey, David A. and Joanne, Buckley., “Handbook for Technical Writing”, Cengage Learning
10. Harve, L., Locke, W. and Morey, A., “Enhancing Employability and Recognizing Diversity”, Universities UK and CSU
11. Lock, R., “Student Activities for taking charge of your Career Direction and Job Search”, Cole Publishing
12. Pease, A., “Body Language”, Sheldon Press

Paper Title : Matlab Programming for Engineers

Paper Code : EC103

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Course Assessment Methods

End semester Assessment (University Exam) :50 marks

Continuous Assessment (Sessional):50 marks (30-sessional, 20-quiz, objective test)

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Course Prerequisites: No specific prerequisites are needed. It is advisable to have a good familiarity with PC operations and a working knowledge of some basic application software (Excel). Basic knowledge of computer programming and an understanding of matrix and linear algebra are highly beneficial.

Course Objectives (CO) : The course provides a gentle introduction to the MATLAB computing environment, and is intended for beginning users and those looking for a review. It is designed to give students a basic understanding of MATLAB, including popular toolboxes. The course consists of lectures and sample MATLAB problems given as assignments and discussed in class. No prior programming experience or knowledge of MATLAB is assumed. Concepts covered include basic use, graphical representations and tips for designing and implementing MATLAB code. The main objectives are: understanding the MATLAB environment; being able to do simple calculations using MATLAB; being able to carry out simple numerical computations and analyses using MATLAB.

Course Outcome : Upon successful completion of this course, the student should be able to: understand the main features of the MATLAB development environment; use the MATLAB GUI effectively; design simple algorithms to solve problems; write simple programs in MATLAB to solve scientific and mathematical problems; know where to find help.

PART-A		Lectures
1	Introduction: Introduction to basic features of Matlab and Matlab desktop	(2)
2	Basic Programming Operations: Script M-files, Arrays and array operations, Multidimensional arrays, Numeric data types, Cell arrays and structures, Character strings, Relational and logical operations, Control flow	(6)

3 Advance Programming Operations: (6)
Functions, M-file debugging and profiling, File and directory management, Set, bit and base functions, Time computations

4 Basic Mathematical Applications: (6)
Matrix Algebra, Data analysis, Data interpolation, Polynomials, Cubic splines

PART-B

5 Advance Mathematical Applications: (5)
Fourier analysis, Optimization, Integration, Differentiation, Differential equations

6 Basic Graphical Operations: (5)
Two-dimensional graphics, Three-dimensional graphics, Use of colors and light in graphics, Generation of images

7 Advance Graphical Operations: (5)
Development of movies and sounds, Printing and exporting graphics, Handling graphics, Development of graphical user interfaces

8 Classes and Interfacing: (5)
Matlab classes and Object-Oriented Programming, Matlab programming interfaces

Books Suggested:

- | | | |
|---|--|---|
| 1 | Mastering MATLAB 7 | D. Hanselman and B. Littlefiels, Pearson Education, New Delhi, 2009 |
| 2 | Getting started with Matlab: A quick introduction for scientists and engineers | Rudra Pratap, Oxford University Press, USA, 2009. |
| 3 | Programming in MATLAB for Engineers | Chapman Stephen J., Cengage Learning, New Delhi, 2009. |
| 4 | MATLAB An Introduction with Applications | Amos Gilat, John Wiley and Sons, New Delhi, 2009 |
| 5 | Essential Matlab for Engineers and Scientists | Brian H Hahn, Elsevier India |
| 6 | Matlab: A practical Introduction To Programming | Attaway, Elsevier India |

- 7 Applied Numerical Methods using Cao Yang, Morris Chung, John Wiley and Sons, New Delhi, 2009
MATLAB
- 8 Modeling and Simulation using using S. Jain, John Wiley and Sons, New Delhi, 2009
MATLAB Simulink

Paper Title : Matlab Programming for Engineers (Practical)

Max (Univ. Exam) Marks : 50

Internal Assessment : 50

Course Assessment Methods

End semester Assessment (University Exam) : Nil

Continuous Assessment: 50 marks (25 day to day work, 25 assignments)

Course Prerequisites: No specific prerequisites are needed. It is advisable to have a have a good familiarity with PC ..

Course Objectives(CO) : The course provides a gentle introduction to the MATLAB computing environment. It is designed to give students a basic understanding of MATLAB, including popular toolboxes. The main objectives are: understanding the MATLAB environment; being able to do simple calculations using MATLAB; being able to carry out simple numerical computations and analyses using MATLAB.

Course Outcome : Upon successful completion of this course, the student should be able to: understand the main features of the MATLAB development environment; use the MATLAB GUI effectively; design simple algorithms to solve problems; write simple programs in MATLAB to solve scientific and mathematical problems; know where to find help.

Syllabus

List of Experiments

1. Basics such as command window, workspace, m-files, clc, clear, who, save, load, format, ;, ..., if, else, switch, for, while, continue, break, try, catch, return, ctrl+C, entering matrices, transpose, subscripts, colon operator, modifying or deleting rows and columns, addition, subtraction, matrix multiplication, element-by-element multiplication / division / left-division, sum, diag, eye, zeros, ones, rand, randn, det, inv, variables, numbers, strings, numeric operators, relational operators, functions.
2. 2-D and 3-D plotting. Modifying graph properties such as title, labels, limits, colors, line-types, line-weights, lights etc. using graphic handles. Exporting graphs as TIFF, PDF and JPEG files.
3. Application of matrix inversion in solving a system of simultaneous linear equations. Measurement of time consumed in solving the problem.
4. Curve fitting and simple regression analysis of some simulated data.

5. Use of FFT method to find the frequency components of a signal buried in a noisy time domain signal.
6. Solution of a multi-variable optimization problem.
7. Differentiation and integration of a function using symbolics.
8. Solution of an ordinary differential equation and development of a corresponding GUI.

Paper Title : Computer Programming

Paper Code : CS104 / CS204

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Course Duration: 45 lectures of one hour each with four lectures per week.

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objective: To get basic knowledge of computers, its components and Operating systems and Linux. Shell Commands. To acquire programming skills in C and basic knowledge of Object Oriented Programming.

PART A

1. Introduction: (8 hrs)

Computer Basic, Block Diagram of Computer, Memory Hierarchy, Types of RAM, Secondary Memory Introduction to Operating Systems, Programming Languages, Program Structure, Linux Shell Commands, Bourne Shell, C Shell, Korn Shell

2. Basic Constructs of C: (8 hrs)

Keywords, Identifiers, Variables, Symbolic Constants, Data Types and their storage, Operands, Arithmetic Operators, Relational Operators, Logical Operators, Bitwise Operators, Increment & Decrement Operators, Expressions, Conditional Expressions, Assignment Operators and Expressions, Type Conversions, Precedence and Order of Evaluation, External Variables and Scope of Variables. Basic Input Output, Formatted I/O.

3. Program Control Flow: (4 hrs)

Statements and Blocks, Conditional Statements, IF, ELSE-IF, Switch Case statements, Control Loops, For, While and Do-While, Go to and Labels.

4. Arrays & Functions: (8 hrs)

Pointers and Addresses, Arrays, Multi dimensional arrays, strings, pointer arrays, Functions, Function Prototyping, Scope of functions, Arguments, Call by value and call by references, static variables, recursion.

PART B

5. Structures: (4 hrs)

Structures, Array of Structures, pointer to structures, Typedef, Unions, Bit fields, passing structures as an argument to functions , C-Preprocessor and Macros, Command line arguments.

6. Input and Output (7 hrs)

Standard and Formatted Input and Output, File Access & its types, Line Input and Output, Types of Files, Binary & ASCII Files, Error handling, stderr and exit functions

7 .Introduction to Object Oriented Programming: (6 hrs)

Classes and Objects, Structures vs Classes, Abstraction, Encapsulation, Polymorphism, Inheritance.

Recommended Books:

1. Brian Kernighan and Dennis M. Ritchie: The C Programming Language, Prentice Hall, 2nd Edition 2007
2. V.K. Jain : Fundamentals of Information Technology and Computer Programming, PHI. Latest Edition
3. K.N.King : C Programming : A Modern Approach, W.W. Norton Company 2nd edition (2008).
4. Herbert Schildt : C: The Complete Reference, Tata Mcgraw Hill Publications 4th edition.
5. Yashwant Kanetkar : Let us C++ , latest edition, BPB Publications
6. E. Balagurusamy : Programming in ANSI C++ , TMH publications, 4th edition, Reprint (2008).

Paper Title : Computer Programming Practical

Internal Assessment : 50

Instruction for Students: The candidate will be attending a laboratory session of 2 hours weekly and students have to perform the practical related to the following list.

1. Introduction to UNIX Shells, C Shell, Bourne Shell, Korn Shell
2. Writing and compiling C Program in Linux.
3. Introduction to basic structure of C program, utility of header and library files.
4. Implementation of program related to the basic constructs in C
5. Program using different data types in C
6. Programs using Loops and Conditional Statements in C
7. Programs using arrays single dimension and multi dimensions in C.
8. Implementation of Matrices and their basic functions such as addition, subtraction, multiplication, inverse.
9. Programs using functions by passing values using call by value and call by reference method
10. Programs related to structures and unions
11. Program to implement array using pointers
12. Programs related to string handling in C
13. Program to manage I/O files
14. Introduction to classes and program related to basic use of classes showing their advantages over structures.
15. Any other program related to theory program to enhance the understanding of students in the subject.

SEMESTER II

Paper Title : Differential Equations and Transforms

Paper Code : MATHS201

Pre Requisite : Calculus (MATHS101)

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objectives

- To learn the methods to formulate and solve linear differential equations and their applications to engineering problems
- To learn the concepts of Laplace transforms and to evaluate Laplace transforms and inverse Laplace transform
- To apply Laplace transforms to solve ordinary differential equations
- To learn the concept of Fourier series, integrals and transforms.
- To learn how to solve heat, wave and Laplace equations.

S. No.	Topic	No. of Lectures
	PART A	
1.	ORDINARY DIFFERENTIAL EQUATIONS Review of geometrical meaning of the differential equation $y' = f(x, y)$, directional fields, Exact differential equations (Scope as in Chapter 8, Section 8.7 of Reference 5), Integrating factors (Scope as in Chapter 8, Section 8.8 of Reference 5), Solution of differential equations with constant coefficients: method of differential operators. Non – homogeneous equations of second order with constant coefficients: Solution by method of variation of parameters (Scope as in Chapter 9, Section 9.7 of Reference 5). Power series method of solution (Scope as in Chapter 10, Section 10.2 of Reference 2)	13

2.	Laplace Transforms Laplace transform, Inverse transforms, shifting, transform of derivatives and integrals. Unit step function, second shifting theorem, Dirac's Delta function. Differentiation and integration of transforms. Convolution Theorem on Laplace Transforms. Application of Laplace transforms to solve ordinary differential equations with initial conditions (Scope as in Chapter 5, Sections 5.1 – 5.5 of Reference 1).	10
	PART B	
3.	Fourier Series and Transforms: Periodic functions, Fourier series, Even and odd series, half range expansions, Complex Fourier Series, Approximation by trigonometric polynomials. Fourier integrals, Fourier Cosine and Sine transforms, Fourier Transforms (Scope as in Chapter 10, Sections 10.1 – 10.5, 10.7 – 10.10 of Reference 1).	8
4.	Partial Differential Equations: Partial differential equations of first order, origin, solution of linear partial differential equations of first order, Integral surfaces passing through a given curve (Scope as in Chapter 2, Sections 1, 2, 4, 5 of Reference 4).	6
5.	Boundary Value Problems: D'Alembert's solution of wave equation, separation of variables: one dimension and two dimension heat and wave equation, Laplace equation in Cartesian and Polar coordinates (Scope as in Chapter 11, Sections 11.1, 11.3 – 11.5, 11.8 – 11.9 of Reference 1).	8

Outcomes

1. The student will learn to solve Ordinary Differential equations.
2. The students will be able to apply the tools of Laplace Transforms to model engineering problems and solve the resulting differential equations.
3. Students will understand the nature and behavior of trigonometric (Fourier) series and apply it to solve boundary value problems.

Paper Title : Ethics and Self Awareness

Paper Code : HSS201 / HSS101

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Lecture Wise Breakup

No. of Lectures

PART A

1. Introduction to Ethics (06)

Concept of Ethics – Nature, Scope, Sources, Types, Functions and Factors influencing Ethics, Approaches to Ethics – Psychological, Philosophical and Social, Broader Ethical Issues in Society.

2. Values, Norms, Standards and Morality (04)

Concept and Role, Relation with Ethics, Psycho-Social Theories of Moral Development – Kohlberg and Carol Gilligan

3. Ethics and Business (05)

Concept of Business Ethics – Nature, Objectives and Factors influencing Business Ethics, 3 C's of Business Ethics, Ethics in Business Activities, Ethical Dilemmas in Business, Managing Ethics

PART B

4. Self-Awareness (04)

Concept of Self Awareness – Need, Elements, Self Assessment – SWOT Analysis, Self Concepts – Self-Knowledge, Assertiveness and Self-Confidence, Self-Esteem

5. Self-Development (11)

Concept of Self-Development, Social Intelligence, Emotional Intelligence, Managing Time and Stress, Positive Human Qualities (Self-Efficacy, Empathy, Gratitude, Compassion, Forgiveness and Motivation), Personality Development Models – Johari Window, Transactional Analysis, Myers Briggs Type Indicator, Self-Awareness and Self-Development Exercises

BOOKS

8. Twain, Allan, “Self-Awareness”

Physics Course 1

Any one of the following three papers to be chosen by institute

Paper Title : Oscillations And Optics (Theory)

Paper Code : APH 101 / APH 201

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

PART A

Ultrasonics: Production and detection of ultrasonics (2)

SHM: Review of SHM, superposition of two SHM in one dimension, charge oscillations in LC circuits (3)

Damped Oscillations: Concept and cause of damping, differential equation of a damped oscillator and different kinds of damping, Methods of describing damping of an oscillator - logarithmic decrement, relaxation time, quality factor, band width. Series LCR circuit as a damped oscillator. (3)

Forced Oscillations: States of forced oscillations, differential equation of forced oscillator – its displacement, velocity and impedance, behaviour of displacement and velocity with driver's frequency, Power, bandwidth, Quality factor and amplification of forced oscillator, resonance in forced oscillators, forced oscillations in series LCR circuit (4)

Wave Motion: Wave equation and its solution, characteristic impedance of a string, reflection and transmission of waves on a string at a boundary, reflection and transmission of energy, the matching of impedances (3)

PART B

Interference: Division of wave front and amplitude; Fresnel's biprism, Newton's rings, Michelson interferometer and its applications for determination of λ and $d\lambda$. (4)

Diffraction: Fresnel and Fraunhofer diffraction, qualitative changes in diffraction pattern on moving from single slit to double slit, plane transmission grating, dispersive power & resolving power of a grating. (5)

Polarization: Methods of polarization, analysis of polarized light, quarter and half wave plates, double refraction. (4)

Lasers: Elementary idea of LASER production, spontaneous emission, stimulated emission, Einstein's coefficients, Helium-Neon, Ruby and semiconductor lasers, applications of lasers. (4)

Fibre Optics: Basics of optical fibre - its numerical aperture, coherent bundle, step index and graded index fibre, material dispersion, fibre Optics sensors, applications of optical fibre in communication systems. (3)

Holography: Basic principle, theory and requirements, applications (2)

References:

1. Physics for Engineers (Prentice Hall India) - N.K. Verma
2. Physics of Vibrations and Waves (5th Edition, John Wiley & Sons) – H.J.Pain
3. Optics – Ajoy Ghatak

Paper Title : *Oscillations and Optics Practical*

Internal Assessment: 50

1. To study Lissajous figures obtained by superposition of oscillations with different frequencies and phases.
2. To find the wavelength of sodium light using Fresnel's biprism.
3. (i) To determine the wavelength of He-Ne laser using transmission grating.

(ii) To determine the slit width using the diffraction pattern.
4. To determine the wave length of sodium light by Newton's rings method.
5. To determine the wave length of sodium light using a diffraction grating.
6. To find the specific rotation of sugar solution using a Bi-quartz Polarimeter.
7. To design a hollow prism and used it find the refractive index of a given liquid.
8. To determine the wavelength of laser using Michelson interferometer.

Paper Title : Quantum And Statistical Physics (Theory)

Paper Code : APH103 / APH203

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

PART A

SPECIAL THEORY OF RELATIVITY

Inertial and non-inertial frames of reference, Galilean transformation, Michelson Morley Experiment, postulates of special theory of relativity, Lorentz transformation, Simultaneity, Length contraction, Time dilation, Doppler effect, Addition of velocities, variation of mass with velocity, mass-energy relation (7)

ORIGIN AND POSTULATES OF QUANTUM PHYSICS

Quantum theory of light, X-rays production, spectrum & diffraction (Bragg's law), photoelectric effect, Compton effect, pair production, photons & gravity, black holes, de-Broglie hypothesis, particle diffraction, uncertainty principle and applications (7)

Postulates of quantum mechanics, Schrodinger theory, time-dependent and time-independent Schrodinger equation, wave function, Born interpretation and normalization, expectation values (3)

PART B

APPLICATIONS OF QUANTUM PHYSICS

Particle in a box (infinite potential well), finite potential step and barrier problems, tunneling, linear harmonic oscillator (one-dimensional) (4)

Hydrogen atom (qualitative), radiative transitions and selection rules, Zeeman effect, Spin-orbit coupling, electron spin, Stern-Gerlach experiment, exclusion principle, symmetric and antisymmetric wavefunctions (5)

STATISTICAL PHYSICS

Maxwell-Boltzmann statistics, molecular energies in an ideal gas, Bose-Einstein and Fermi-Dirac statistics, black body radiation, Rayleigh-Jeans and Planck's radiation laws, free electrons in a metal, electron-energy distribution, Fermi energy, electronic specific heat, conduction in metals, thermionic emission. (10)

2. Solid State Physics, by C. Kittel (Wiley Eastern)
3. Solid State Physics, by S.O. Pillai (New Age International)
4. Statistical Physics and Thermodynamics by V.S. Bhatia

Paper Title: Quantum And Statistical Physics (Practical)

Internal Assessment: 50

- 1) To study the quantized energy level of the first excited state in the Argon using the Frank-Hertz setup.
- 2) To find the value of Planck's constant and evaluate the work function of cathode material by used of photoelectric cell.
- 3) To study various characteristics of photo-voltaic cell: (a) Voltage-current characteristics, (b) loading characteristics, (c) power-resistance characteristics and (d) inverse square law behavior of the photo-current with distance of source of light from photo-voltaic cell
- 4) To study the response of a photo-resistor to varying intensity of light falling on it and deduce spectral sensitivity of its semiconductor material.
- 5) To study the Balmer Series of Mercury and Hydrogen spectrum using diffraction grating and calculate Rydberg constant

Paper Title : Physics of Materials
Paper Code : APH207 / APH107
Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Part - A

Crystal structure: Bonding forces and energies, Primary and Secondary bonds, Space Lattices, Symmetries in a cubic lattice, Crystal Structures (cubic and hexagonal cells), Assignment of coordinates, directions and planes in crystals, Linear, Planar and Space densities in crystals, close packed morphology (Hexagonal and cubic close packing), single and polycrystalline structures, interstitial spaces (trigonal, tetrahedral and octahedral voids)

Structure of ceramics (NaCl, Zinc blende, silica and silicates, diamond crystal, Graphite, Fullerenes and carbon nanotubes)

Structure of polymers, crystallinity of long chain polymers

Crystal Structure analysis, X-ray diffraction and Bragg's law, Powder method for study of X-ray diffraction pattern

Crystal Defects (Point, line, surface and volume imperfections) **(14hrs)**

Diffusion: Diffusion mechanisms, steady state diffusion, non-steady state diffusion, factors affecting diffusion, applications based on diffusion (corrosion resistance of Duralumin, carburization of steel, decarburization of steel, doping of semiconductors) **(3hrs)**

Elastic, Anelastic and Viscoelastic Behaviour Elastic behaviour and its atomic model, rubber like elasticity, anelastic behaviour, relaxation processes, viscoelastic behaviour, spring-dashpot model **(3hrs)**

Part - B

Plastic Deformations and strengthening mechanisms : Tensile properties (Yield strength, Tensile Strength, Ductility, Resilience, Toughness), Dislocations and plastic deformation, characteristics of dislocations, slip systems, slip in single crystals, plastic deformation of polycrystalline materials, mechanisms of strengthening in metals (grain size reduction, solid-solution strengthening, strain hardening), recovery, recrystallization and grain growth **(5hrs)**

Fracture, Fatigue and Creep : Fracture (Ductile and brittle fractures), principles of fracture mechanics, fracture toughness, ductile to brittle transitions Cyclic stresses, S-N curve, crack

initiation and propagation, factors that affect fatigue life, environmental effects, generalized creep behavior, stress and temperature effects.

(5hrs)

Phase Diagrams : One-Component (or Unary) Phase Diagrams, Binary Isomorphous Systems, Interpretation of Phase Diagrams, Development of Microstructure in Isomorphous Alloys, Mechanical Properties of Isomorphous Alloys, Binary Eutectic Systems, Development of Microstructure in Eutectic Alloy, Equilibrium Diagrams Having Intermediate Phases or Compounds, Eutectic and Peritectic Reactions, The Gibbs Phase - Rule

(6hrs)

Phase Transformations : Kinetics of phase transformation, kinetics of solid state reactions, Isothermal transformation diagrams, continuous cooling transformation, temper embrittlement

(4hrs)

3. Solid State Physics (New Age Publishers) – S.O. Pillai
4. Introduction to Solids (Tata McGraw Hill, Third Edition) - Leonid V Azaroff

Paper Title : Physics of Materials (Practical)

Internal Assessment : 50

1. To find the energy band gap of the given semiconductor by four probe method.
2. To study the Hall Effect of a given semiconductor.
3. To determine the dielectric constant of the given materials.
4. To study the B-H curve of the ferromagnetic materials.
5. To determine the value of e/m for electron by long solenoid (helical) method.
6. To study the variation of magnetic field with distance along the axis of a circular coil carrying current by plotting a graph.
7. To find the Curie temperature of a Ferroelectric material by measuring Capacitance as a function of temperature.
8. To determine the thermal conductivity of an insulator material using guarded plate method (Lee's disc method).
9. To Study (a) Voltage-current characteristics (b) loading characteristics (c) Power-Resistance characteristics and (d) intensity response of photovoltaic cell.

Paper Title : Introduction to Environment Science

Paper Code : GS101 / GS 201

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

PART A

General (04)

Introduction, components of the environment, environmental degradation.

Ecology (04)

Elements of ecology: Ecological balance and consequences of change, principles of environmental impact assessment.

Air pollution and control (06)

Atmospheric composition, energy balance, climate, weather, dispersion, sources and effects of pollutants, primary and secondary pollutants, green house effect, depletion of ozone layer, standards and control measures.

PART B

Water pollution and control (06)

Hydrosphere, natural water, pollutants their origin and effects, river/lake/ground water pollution, standards and control.

Land Pollution (06)

Lithosphere, pollutants (municipal, industrial, commercial, agricultural, hazardous solid wastes): their origin and effects, collection and disposal of solid waste, recovery and conversion methods.

Noise Pollution (04)

Sources, effects, standards and control.

Paper Title : ANALOG ELECTRONIC CIRCUITS -I

Paper Code : EC 201

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Course Objectives:

5. To provide the capability to use abstractions to analyze and design simple electronic circuits.
6. To make students understand transistors and its biasing and how complex devices such as Bipolar Junction Transistors are modeled and the use of the mathematical models in the design and analysis of various circuits.
7. To familiarize the student with the analysis and design of basic transistor amplifier circuits, feedback amplifiers, oscillators and power amplifiers.

Lecture wise breakup

No. of Lectures

Part A

Transistor and its Biasing: Transistor operation and Characteristics, CB, CC and CE configurations, Operating point, Bias stability, various biasing circuits, stabilization against variation in I_{co} , V_{be} and β , Bias compensation, Thermistor and Sensistor compensation, Thermal Runaway, Thermal stability. (8)

BJT Modeling: Transistor as an amplifier, comparison of CB, CC and CE amplifier stages, BJT modeling, Important parameters: Input Impedance, Output Impedance, voltage and current gain, Transistor h-parameters, conversion formulas, r_e model, analysis of transistor amplifiers using h-parameters. (8)

Field Effect Transistors: Introduction, FET Construction, types of FET, Characteristics of FETs, MOSFET: types and working principle, FET biasing, FET small signal model, FET applications. (6)

Part B

BJT Frequency Response: Frequency Response of single stage CE amplifier, Multistage amplifiers, Direct coupled, RC coupled and Transformer coupled, frequency response of multistage amplifiers, cascode circuits. (6)

Oscillators: Introduction to feedback, basic principles of sinusoidal oscillators, condition for sustained oscillations, tuned collector, tuned base, Hartley oscillator, Colpitt's Oscillator, Phase Shift Oscillator, Wein Bridge Oscillator and Crystal Oscillator. (8)

Power Amplifiers: Classification of amplifiers, Single tuned and double tuned amplifiers, analysis of class A, B, C and AB amplifiers, push pull amplifier, complementary symmetry, amplitude distortion in amplifiers, harmonics, power distortion, heat sinks. (8)

Recommended Books:

1. Integrated electronics, Millman & Halkias, TMH.
2. Electronics Devices & Circuit Theory, RL Boylestead & L Nashelsky, PHI
3. Microelectronic Circuits, AS Sedra & KC Smith, OXFORD
4. Electronics Circuit Analysis and Design, Donald A. Neamen, Tata McGraw Hill

Paper Title : ANALOG ELECTRONIC CIRCUITS –I (Practical)

Internal Assessment : 50

List of Experiments:

1. Familiarization with electronic components and usage of Multimeter
2. Familiarization with CRO and Signal Generator.
3. To study the V-I characteristics of pn junction diode and determine static resistance and dynamic resistance.
4. To implement clipper and clamper circuits.
5. To plot the characteristics of BJT
6. To plot the frequency response of a single stage BJT amplifier.
7. To measure the voltage and current gain of a BJT amplifier.
8. To plot the characteristics of FET.
9. To verify the operation of BJT as an amplifier and draw the frequency response RC coupled amplifier.
10. To measure the distortion in the output of a push pull amplifier.

All these experiments are to be performed on bread board and simulated in Pspice software.

Paper Title : DIGITAL DESIGN
Paper Code : EC 203
Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Course Objectives:

8. To apply minimization techniques for reducing the functions up to six variables.
9. To design various combinational circuits
10. To write the truth table, excitation table, characteristic equations of various flip flops and to design the sequential circuits using Flip flops.
11. To familiarize the various A/D, D/A Converters, Logic families and their characteristics.
12. To design an application based on digital circuits.

**Lecture wise breakup
Lectures**

No. of

Part A

Minimization Techniques

Sum of Products and Products of Sum forms, Minterms & Maxterms, Karnaugh Map for two, three, four five and six variables, Quine-McCluskey method (6)

Combinational Circuit Design

Half adder, full adder, subtractor, BCD adder, comparator, code converter, encoder decoder, multiplexer, demultiplexer, parity detector and generator, PLA, PAL and ROM (6)

Flip Flops

1-bit memory cell, clocked and unclocked flip flops, S-R Flip flop, D flip flop, JK Flip flop, T flip flop, edge triggered flip flop, race around condition, Master slave flip flop, conversion of flip flops. (6)

Counters Ripple counter, design of Mod-N ripple counter, design of synchronous counter with and without lockout condition, decade counter, ring counter, Johnson counter (4)

Part B

Shift Registers Serial in serial out shift register, serial in parallel out shift register, parallel in serial out shift register and parallel in parallel out shift register, bidirectional shift register, universal shift register. (5)

A/D And D/A Converters

Weighted resistor D/A converter, Binary ladder D/A converter. A/D Converters- flash type, successive approximation, counter ramp type, dual slope type, characteristics of ADC and DAC. (6)

Logic Families

Characteristics of logic families, RTL, TTL, ECL, DTL, DCTL, I²L, HTL, CMOS logic families.

(9)

Recommended Books:

1. Digital Design by Morris Mano, PHI, 4th edition
2. Digital principles and Applications, by Malvino Leach
3. Digital System Principles and Applications, by R J Tocci (PHI)
4. Modern Digital Electronics, by R P Jain, TMH
5. Digital Integrated Electronics, by Taub Schilling, TMH

Paper Title : DIGITAL DESIGN (Practical)

Internal Assessment : 50

List of Experiments

1. To Study the data sheets of TTL and ECL gates
2. Implementation of Adder and Subtractor using Logic Gates.
3. Implementation of Binary Adder/Subtractor.
4. Implementation of BCD Adder.
5. Design & implementation of Combinational circuits using Multiplexers
6. Design and implement a Universal shift register having shift-right, shift-left, SISO, PIPO capabilities.
7. Implementation of Flip-flops using Logic Gates.
8. Implementations of Ripple counter.
9. Implementation of Modulo-N Synchronous Counter.
10. Implementation of Synchronous counters with unused states and/or avoiding Lock Out condition.
11. To convert 8 bit Digital data to Analog value using DAC
12. To convert Analog value into 8 bit Digital data using ADC.
