SEMESTER I

Paper Title : Calculus
Paper Code : MATHS101

Pre Requisite : 10+2

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Course Duration: 45 lectures of one hour each.

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objectives

- To understand the behaviour of infinite series and its use.
- To learn the concepts of functions of two and more than two variables and their applications.
- To learn the methods to evaluate multiple integrals and their applications to various problems.
- To understand the concepts of Vector calculus and their use in engineering problems.

S. No.	Topic	No. of Lectures
	PART A	
1.	FUNCTIONS OF ONE VARIABLE Sequences and Series: Sequences, Limits of sequences, Infinite series, series of positive terms, Integral test, Comparison test, Ratio test, Root test. Alternating series, Absolute and Conditional Convergence, Leibnitz test. Power series: radius of convergence of power series, Taylor's and Maclaurin's Series, Formulae for remainder term in Taylor and Maclaurin series, Error estimates. (Scope as in Chapter 8, Sections 8.1 – 8.10 of Reference 1). Integral Calculus: Areas of curves, Length of curves, Volume and surface areas of revolution (Scope as in Chapter 5, Sections 5.1, 5.3, 5.5, 5.6 of Reference 1).	9
2.	DIFFERENTIAL CALCULUS OF FUNCTIONS OF TWO AND THREE VARIABLES Concept of limit and continuity of a function of two and three variables, Partial derivatives, total derivative, Euler's theorem for homogeneous functions, composite function, differentiation of an implicit function, chain rule, change of variables, Jacobian, Taylor's theorem, Errors and increments, Maxima and minima of a function of two and three variables, Lagrange's method of multipliers (Scope as in Chapter 12, Sections 12.1 – 12.6, 12.8 – 12.9 of Reference 1).	9

3.	SOLID GEOMETRY Cylinder, Cone, Quadric surfaces, Surfaces of revolution. (Scope as in: 10.6, 10.7 of Reference 1).	3
PART B		
4.	INTEGRAL CALCULUS OF FUNCTIONS OF TWO AND THREE VARIABLES Double and triple integrals, Change of order of integration, Change of Variables, Applications to area, volume and surface area. (Scope as in Chapter 13 of Reference 1).	9
5.	VECTOR DIFFERENTIAL CALCULUS Vector-valued functions and space curves, arc lengths, unit tangent vector, Curvature and torsion of a curve, Gradient of a Scalar field, Directional Derivative (Scope as in Chapter 11, Sections 11.1, 11.3, 11.4, Chapter 12, Section 12.7 of Reference 1).	8
6.	VECTOR INTEGRAL CALCULUS Line integrals, Vector fields, Work, Circulation and Flux, Path Independence, Potential functions and Conservative fields, Green's theorem in the plane, Surface Areas and Surface Integrals, Stoke's Theorem, Gauss Divergence Theorem (Statements only) (Scope as in Chapter 14 of Reference 1).	7

Outcomes

- The students are able to test the behavior of infinite series.
- Ability to analyze functions of more than two variables and their applications.
- Ability to evaluate multiple integrals and apply them to practical problems.
- Ability to apply vector calculus to engineering problems

Paper Title : Introduction to Computer Science and Engineering

Paper Code : CS102

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Course Objectives:

1. To appraise students about various disciplines in Computer Science and Engineering.
2. To make students aware of emerging trends of Computer Science and Engineering.

1. Introduction

What is computer science?, Differentiating computer science from engineering, Classification of computers, History, Types of Computers, Block Diagram of a Computer System, Introduction to various units, CPU, Memory, Input and Output devices, Auxiliary storage devices. Turing model, Von-Newmann model, social and ethical issues in computer science and engineering. (8)

2. COMPUTER HARDWARE AND SOFTWARE

Introduction to computer hardware, components of mother boards & its types-ports, slots, connectors, add on cards, Basics of Number System. Application software, system software, interpreter, compilers, editor, computer viruses, worms, trojan. (6)

3. Computer Organization

Central processing unit, computer storage: memory hierarchy, basics of RAM, ROM, PROM, EPROM, Floppy, CD Rom, CDRW, DVD, Virtual memory, Cache memory, Physical memory (5)

Section B

4. LOGIC DEVELOPMENT AND ALGORITHMS

Various techniques to solve a problem, Ways to specify an algorithm, Flow charts. (6)

5. AREAS OF COMPUTER SCIENCE AND ENGINEERING

Theory of computation, algorithms and data structures, Database, Artificial Intelligence, Computer Networks, Software Engineering, Computer Vision, Web and Internet. (16)

4. Trends in computing. Social and ethical issues related to computing technology, Professional development opportunities. (4)

Course Outcomes:

1. The student will have knowledge about various fields of Computer Science and Engineering.

Text Books:

1. Computing Fundamentals, Peter Norton, Tata McRaw Hill

Reference Books:

1. Computer Science Handbook, Allen B. Tucker, CRC Press

Paper Title : Programming Fundamentals (Theory)

Paper Code : CS101 / CS201

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objective: To get basic knowledge of computers, its components and Operating systems and Linux. Shell Commands.

PART A

1. Introduction: (5 hrs)
Introduction to Programming Languages, Flowcharts, Algorithms, System Software (Assembler, Compiler, Translator, Debugger), Program Structure.
2. Basic Constructs of C: (7 hrs)
Keywords, Identifiers, Variables, Symbolic Constants, Data Types and their storage, Operands, Arithmetic Operators, Relational Operators, Logical Operators, Bitwise Operators, Increment & Decrement Operators, Expressions, Conditional Expressions, Assignment Operators and Expressions, Type Conversions, Precedence and Order of Evaluation, External Variables and Scope of Variables. Basic Input Output, Formatted I/O.
3. Program Control Flow: (7 hrs)
Statements and Blocks, Conditional Statements, IF, ELSE-IF, Switch Case statements, Control Loops, For, While and Do-While, Go to and Labels.
4. Arrays & Functions: (7hrs)
Arrays, Multi dimensional arrays, strings, pointer arrays, Functions, Function Prototyping, Scope of functions, Arguments, Call by value and call by references, static variables, recursion.

PART B

5. Structures: (6 hrs)
Structures, Array of Structures, Typedef, Unions, Bit fields, passing structures as an argument to functions, C-Pre-processor and Macros, Command line arguments.

6. Pointers:(6)

Pointer declaration, initialization, Pointer arithmetic, Pointer to array and Pointer to structure.

7. Input and Output (7 hrs)

Standard and Formatted Input and Output, File Access & its types, Line Input and Output, Types of Files, Binary & ASCII Files, Error handling, stderr and exit functions.

Recommended Books:

1. Brian Kernighan and Dennis M. Ritchie: The C Programming Language, Prentice Hall, 2nd Edition 2007
2. V.K. Jain : Fundamentals of Information Technology and Computer Programming, PHI. Latest Edition
3. K.N.King : C Programming : A Modern Approach, W.W. Norton Company 2nd edition (2008).
4. Herbert Schildt : C: The Complete Reference, Tata Mcgraw Hill Publications 4th edition.
5. Yashwant Kanetkar : Let us C++ , latest edition, BPB Publications
6. E. Balagurusamy : Programming in ANSI C++ , TMH publications, 4th edition, Reprint (2008).
7. Gottfried : Programming in ANSI C, Schaum Series, TMH publications, 2nd Edition (1996).

Paper Title : Programming Fundamentals Practical
Internal Assessment : 50

Instruction for Students: The candidate will be attending a laboratory session of 2 hours weekly and students have to perform the practical related to the following list.

1. Introduction to basic structure of C program, utility of header and library files.
2. Implementation of program related to the basic constructs in C
3. Program using different data types in C
4. Programs using Loops and Conditional Statements in C
5. Programs using arrays single dimension and multi dimensions in C.
6. Implementation of Matrices and their basic functions such as addition, subtraction, multiplication, inverse.
7. Programs using functions by passing values using call by value and call by reference method
8. Programs related to structures and unions
9. Program to implement array using pointers
10. Programs related to string handling in C
11. Program to manage I/O files and Pointers

Physics Course 1

Any one of the following three papers to be chosen by institute

Paper Title : Oscillations And Optics (Theory)

Paper Code : APH 101 / APH 201

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

PART A

Ultrasonics: Production and detection of ultrasonics (2)

SHM: Review of SHM, superposition of two SHM in one dimension, charge oscillations in LC circuits (3)

Damped Oscillations: Concept and cause of damping, differential equation of a damped oscillator and different kinds of damping, Methods of describing damping of an oscillator - logarithmic decrement, relaxation time, quality factor, band width. Series LCR circuit as a damped oscillator. (3)

Forced Oscillations: States of forced oscillations, differential equation of forced oscillator – its displacement, velocity and impedance, behaviour of displacement and velocity with driver's frequency, Power, bandwidth, Quality factor and amplification of forced oscillator, resonance in forced oscillators, forced oscillations in series LCR circuit (4)

Wave Motion: Wave equation and its solution, characteristic impedance of a string, reflection and transmission of waves on a string at a boundary, reflection and transmission of energy, the matching of impedances (3)

PART B

Interference: Division of wave front and amplitude; Fresnel's biprism, Newton's rings, Michelson interferometer and its applications for determination of λ and $d\lambda$. (4)

Diffraction: Fresnel and Fraunhofer diffraction, qualitative changes in diffraction pattern on moving from single slit to double slit, plane transmission grating, dispersive power & resolving power of a grating. (5)

Polarization: Methods of polarization, analysis of polarized light, quarter and half wave plates, double refraction. (4)

Lasers: Elementary idea of LASER production, spontaneous emission, stimulated emission, Einstein's coefficients, Helium-Neon, Ruby and semiconductor lasers, applications of lasers. (4)

Fibre Optics: Basics of optical fibre - its numerical aperture, coherent bundle, step index and graded index fibre, material dispersion, fibre Optics sensors, applications of optical fibre in communication systems. (3)

Holography: Basic principle, theory and requirements, applications (2)

References:

1. Physics for Engineers (Prentice Hall India) - N.K. Verma
2. Physics of Vibrations and Waves (5th Edition, John Wiley & Sons) – H.J.Pain
3. Optics – Ajoy Ghatak

Paper Title : *Oscillations and Optics Practical*

Internal Assessment: 50

1. To study Lissajous figures obtained by superposition of oscillations with different frequencies and phases.
2. To find the wavelength of sodium light using Fresnel's biprism.
3. (i) To determine the wavelength of He-Ne laser using transmission grating.

(ii) To determine the slit width using the diffraction pattern.
4. To determine the wave length of sodium light by Newton's rings method.
5. To determine the wave length of sodium light using a diffraction grating.
6. To find the specific rotation of sugar solution using a Bi-quartz Polarimeter.
7. To design a hollow prism and used it find the refractive index of a given liquid.
8. To determine the wavelength of laser using Michelson interferometer.

Paper Title : Quantum And Statistical Physics (Theory)

Paper Code : APH103 / APH203

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

PART A

SPECIAL THEORY OF RELATIVITY

Inertial and non-inertial frames of reference, Galilean transformation, Michelson Morley Experiment, postulates of special theory of relativity, Lorentz transformation, Simultaneity, Length contraction, Time dilation, Doppler effect, Addition of velocities, variation of mass with velocity, mass-energy relation (7)

ORIGIN AND POSTULATES OF QUANTUM PHYSICS

Quantum theory of light, X-rays production, spectrum & diffraction (Bragg's law), photoelectric effect, Compton effect, pair production, photons & gravity, black holes, de-Broglie hypothesis, particle diffraction, uncertainty principle and applications (7)

Postulates of quantum mechanics, Schrodinger theory, time-dependent and time-independent Schrodinger equation, wave function, Born interpretation and normalization, expectation values (3)

PART B

APPLICATIONS OF QUANTUM PHYSICS

Particle in a box (infinite potential well), finite potential step and barrier problems, tunneling, linear harmonic oscillator (one-dimensional) (4)

Hydrogen atom (qualitative), radiative transitions and selection rules, Zeeman effect, Spin-orbit coupling, electron spin, Stern-Gerlach experiment, exclusion principle, symmetric and antisymmetric wavefunctions (5)

STATISTICAL PHYSICS

Maxwell-Boltzmann statistics, molecular energies in an ideal gas, Bose-Einstein and Fermi-Dirac statistics, black body radiation, Rayleigh-Jeans and Planck's radiation laws, free electrons in a metal, electron-energy distribution, Fermi energy, electronic specific heat, conduction in metals, thermionic emission. (10)

References:

1. Concepts of Modern Physics, by Arthur Beiser (McGraw-Hill)
2. Solid State Physics, by C. Kittel (Wiley Eastern)
3. Solid State Physics, by S.O. Pillai (New Age International)
4. Statistical Physics and Thermodynamics by V.S. Bhatia

Paper Title: Quantum And Statistical Physics (**Practical**)

Internal Assessment: 50

- 1) To study the quantized energy level of the first excited state in the Argon using the Frank-Hertz setup.
- 2) To find the value of Planck's constant and evaluate the work function of cathode material by used of photoelectric cell.
- 3) To study various characteristics of photo-voltaic cell: (a) Voltage-current characteristics, (b) loading characteristics, (c) power-resistance characteristics and (d) inverse square law behavior of the photo-current with distance of source of light from photo-voltaic cell
- 4) To study the response of a photo-resistor to varying intensity of light falling on it and deduce spectral sensitivity of its semiconductor material.
- 5) To study the Balmer Series of Mercury and Hydrogen spectrum using diffraction grating and calculate Rydberg constant

Paper Title : Physics of Materials
Paper Code : APH207 / APH107
Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Part - A

Crystal structure: Bonding forces and energies, Primary and Secondary bonds, Space Lattices, Symmetries in a cubic lattice, Crystal Structures (cubic and hexagonal cells), Assignment of coordinates, directions and planes in crystals, Linear, Planar and Space densities in crystals, close packed morphology (Hexagonal and cubic close packing), single and polycrystalline structures, interstitial spaces (trigonal, tetrahedral and octahedral voids)

Structure of ceramics (NaCl, Zinc blende, silica and silicates, diamond crystal, Graphite, Fullerenes and carbon nanotubes)

Structure of polymers, crystallinity of long chain polymers

Crystal Structure analysis, X-ray diffraction and Bragg's law, Powder method for study of X-ray diffraction pattern

Crystal Defects (Point, line, surface and volume imperfections) **(14hrs)**

Diffusion: Diffusion mechanisms, steady state diffusion, non-steady state diffusion, factors affecting diffusion, applications based on diffusion (corrosion resistance of Duralumin, carburization of steel, decarburization of steel, doping of semiconductors) **(3hrs)**

Elastic, Anelastic and Viscoelastic Behaviour Elastic behaviour and its atomic model, rubber like elasticity, anelastic behaviour, relaxation processes, viscoelastic behaviour, spring-dashpot model **(3hrs)**

Part - B

Plastic Deformations and strengthening mechanisms : Tensile properties (Yield strength, Tensile Strength, Ductility, Resilience, Toughness), Dislocations and plastic deformation, characteristics of dislocations, slip systems, slip in single crystals, plastic deformation of polycrystalline materials, mechanisms of strengthening in metals (grain size reduction, solid-solution strengthening, strain hardening), recovery, recrystallization and grain growth **(5hrs)**

Fracture, Fatigue and Creep : Fracture (Ductile and brittle fractures), principles of fracture mechanics, fracture toughness, ductile to brittle transitions Cyclic stresses, S-N curve, crack

initiation and propagation, factors that affect fatigue life, environmental effects, generalized creep behavior, stress and temperature effects.

(5hrs)

Phase Diagrams : One-Component (or Unary) Phase Diagrams, Binary Isomorphous Systems, Interpretation of Phase Diagrams, Development of Microstructure in Isomorphous Alloys, Mechanical Properties of Isomorphous Alloys, Binary Eutectic Systems, Development of Microstructure in Eutectic Alloy, Equilibrium Diagrams Having Intermediate Phases or Compounds, Eutectic and Peritectic Reactions, The Gibbs Phase - Rule

(6hrs)

Phase Transformations : Kinetics of phase transformation, kinetics of solid state reactions, Isothermal transformation diagrams, continuous cooling transformation, temper embrittlement

(4hrs)

3. Solid State Physics (New Age Publishers) – S.O. Pillai
4. Introduction to Solids (Tata McGraw Hill, Third Edition) - Leonid V Azaroff

Paper Title : Physics of Materials (Practical)

Internal Assessment : 50

1. To find the energy band gap of the given semiconductor by four probe method.
2. To study the Hall Effect of a given semiconductor.
3. To determine the dielectric constant of the given materials.
4. To study the B-H curve of the ferromagnetic materials.
5. To determine the value of e/m for electron by long solenoid (helical) method.
6. To study the variation of magnetic field with distance along the axis of a circular coil carrying current by plotting a graph.
7. To find the Curie temperature of a Ferroelectric material by measuring Capacitance as a function of temperature.
8. To determine the thermal conductivity of an insulator material using guarded plate method (Lee's disc method).
9. To Study (a) Voltage-current characteristics (b) loading characteristics (c) Power-Resistance characteristics and (d) intensity response of photovoltaic cell.

Paper Title : Ethics and Self Awareness (Theory)
Paper Code : HSS101 / HSS201

Max (Univ. Exam) Marks: 50

Time of examination: 3hrs.

Internal Assessment: 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Lecture Wise Breakup

No. of Lectures

PART A

1. Introduction to Ethics (06)

Concept of Ethics – Nature, Scope, Sources, Types, Functions and Factors influencing Ethics, Approaches to Ethics – Psychological, Philosophical and Social, Broader Ethical Issues in Society.

2. Values, Norms, Standards and Morality (04)

Concept and Role, Relation with Ethics, Psycho-Social Theories of Moral Development – Kohlberg and Carol Gilligan

3. Ethics and Business (05)

Concept of Business Ethics – Nature, Objectives and Factors influencing Business Ethics, 3 C's of Business Ethics, Ethics in Business Activities, Ethical Dilemmas in Business, Managing Ethics

PART B

4. Self-Awareness (04)

Concept of Self Awareness – Need, Elements, Self Assessment – SWOT Analysis, Self Concepts – Self-Knowledge, Assertiveness and Self-Confidence, Self-Esteem

5. Self-Development (11)

Concept of Self-Development, Social Intelligence, Emotional Intelligence, Managing Time and Stress, Positive Human Qualities (Self-Efficacy, Empathy, Gratitude, Compassion, Forgiveness and Motivation), Personality Development Models – Johari Window, Transactional Analysis, Myers Briggs Type Indicator, Self-Awareness and Self-Development Exercises

BOOKS

1. Murthy, C.S.V., "Business Ethics – Text and Cases", Himalaya Publishing House
2. Hartman, Laura P. and Chatterjee, Abha, "Business Ethics", Tata McGraw Hill

3. Rao, A.B., “Business Ethics and Professional Values”, Excel Books
4. Velasquez, Manuel G., “Business Ethics – Concepts and Cases”, Prentice Hall
5. Corey, G., Schneider Corey, M., & Callanan, P., “Issues and Ethics in the Helping Professions”, Brooks/Cole.
6. Hall, Calvin S., Lindzey, Dardner. & Cambell, John B., “Theories of Personality”, Hamilton Printing Company.
7. Leary, M.R., “The Curse of Self: Self-awareness, Egotism and the Quality of Human Life”, Oxford University Press.
8. Twain, Allan, “Self-Awareness”

Paper Title : Introduction to Environment Science

Paper Code : GS101 / GS 201

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

PART A

General (04)

Introduction, components of the environment, environmental degradation.

Ecology (04)

Elements of ecology: Ecological balance and consequences of change, principles of environmental impact assessment.

Air pollution and control (06)

Atmospheric composition, energy balance, climate, weather, dispersion, sources and effects of pollutants, primary and secondary pollutants, green house effect, depletion of ozone layer, standards and control measures.

PART B

Water pollution and control (06)

Hydrosphere, natural water, pollutants their origin and effects, river/lake/ground water pollution, standards and control.

Land Pollution (06)

Lithosphere, pollutants (municipal, industrial, commercial, agricultural, hazardous solid wastes): their origin and effects, collection and disposal of solid waste, recovery and conversion methods.

Noise Pollution (04)

Sources, effects, standards and control.

Books & References

- Nebel, B.J., "Environmental Science" Prentice –Hall Inc., 1987.

SEMESTER II

Paper Title : Differential Equations and Transforms

Paper Code : MATHS201

Pre Requisite : Calculus (MATHS101)

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objectives

- To learn the methods to formulate and solve linear differential equations and their applications to engineering problems
- To learn the concepts of Laplace transforms and to evaluate Laplace transforms and inverse Laplace transform
- To apply Laplace transforms to solve ordinary differential equations
- To learn the concept of Fourier series, integrals and transforms.
- To learn how to solve heat, wave and Laplace equations.

S. No.	Topic	No. of Lectures
	PART A	
1.	ORDINARY DIFFERENTIAL EQUATIONS Review of geometrical meaning of the differential equation $y' = f(x, y)$, directional fields, Exact differential equations (Scope as in Chapter 8, Section 8.7 of Reference 5), Integrating factors (Scope as in Chapter 8, Section 8.8 of Reference 5), Solution of differential equations with constant coefficients: method of differential operators. Non – homogeneous equations of second order with constant coefficients: Solution by method of variation of parameters (Scope as in Chapter 9, Section 9.7 of Reference 5). Power series method of solution (Scope as in Chapter 10, Section 10.2 of Reference 2)	13

2.	Laplace Transforms Laplace transform, Inverse transforms, shifting, transform of derivatives and integrals. Unit step function, second shifting theorem, Dirac's Delta function. Differentiation and integration of transforms. Convolution Theorem on Laplace Transforms. Application of Laplace transforms to solve ordinary differential equations with initial conditions (Scope as in Chapter 5, Sections 5.1 – 5.5 of Reference 1).	10
	PART B	
3.	Fourier Series and Transforms: Periodic functions, Fourier series, Even and odd series, half range expansions, Complex Fourier Series, Approximation by trigonometric polynomials. Fourier integrals, Fourier Cosine and Sine transforms, Fourier Transforms (Scope as in Chapter 10, Sections 10.1 – 10.5, 10.7 – 10.10 of Reference 1).	8
4.	Partial Differential Equations: Partial differential equations of first order, origin, solution of linear partial differential equations of first order, Integral surfaces passing through a given curve (Scope as in Chapter 2, Sections 1, 2, 4, 5 of Reference 4).	6
5.	Boundary Value Problems: D'Alembert's solution of wave equation, separation of variables: one dimension and two dimension heat and wave equation, Laplace equation in Cartesian and Polar coordinates (Scope as in Chapter 11, Sections 11.1, 11.3 – 11.5, 11.8 – 11.9 of Reference 1).	8

Outcomes

1. The student will learn to solve Ordinary Differential equations.
2. The students will be able to apply the tools of Laplace Transforms to model engineering problems and solve the resulting differential equations.
3. Students will understand the nature and behavior of trigonometric (Fourier) series and apply it to solve boundary value problems.

Paper Title : Communication Skills
Paper Code : HSS202 / HSS102

Max (Univ. Exam) Marks: 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Part –A

Lecture Wise Breakup	No. of Lectures
1. Fundamentals of Communication Skills	(02)
Scope and Significance of Communication Skills, Listening, Speaking, Reading and Writing	
2. Writing Skills	(04)
Basics of Grammar – Word Order, Sentence Construction, Placing of Subject and Verbs, Parts of Speech, Use of Tenses, Articles, Prepositions, Phrasal Verbs, Active-Passive, Narration	
3. Vocabulary Building and Writing	(03)
Word Formations, Synonyms, Antonyms, Homonyms, One-Word Substitutes, Idioms and Phrases, Abbreviations of Scientific and Technical Words	
4. Speaking Skills	(03)
Introduction to Phonetic Sounds, English Phonemes, Stress, Rhythm and Intonation, Countering Stage Fright and Barriers of Communication	
5. Reading and Comprehension	(02)

Part –B

Lecture Wise Breakup	No. of Lectures
1. Advanced Communication Skills	(02)
Scope, Significance, Process of Communication in an organization, Types and Levels, Communication Networks, Technical Communication, Tools of Effective Communication	
2. Speaking Skills and Personality Development	(05)
Interpersonal Communication, Presentation Skills, Body Language and Voice Modulation, Persuasion, Negotiation and Linguistic Programming, Public Speaking, Group Discussions, Interviews and Case Studies, Power Point Presentations , Relevant to the context and locale, Technical Presentations, Conducting , Meeting and Conferences	
3. Communication and Media	(01)

- 4. Advanced Techniques in Speaking Skills (02)**
Importance of Listening/Responding to native and global accents, Telephonic Interviews and Video Conferencing
- 5. Advanced Techniques in Technical Writing (04)**
Job Application, CV Writing, Business Letters, Memos, Minutes, Reports and Report Writing Strategies, E-mail Etiquette, Blog Writing, Instruction Manuals and Technical Proposals

Practical Sessions

1. Individual presentations with stress on delivery and content
2. Overcoming Stage Fright - Debates, extempore
3. How to discuss in a group - Group Discussion
4. Discussion on recent developments and current debates in the media
5. How to prepare for an Interview and face it with confidence
6. Conducting meeting and conferences
7. Exercises on Composition & Comprehension, Reading Improvement

TEXT BOOKS

1. Ludlow, R. and Panton, F., "The Essence of Effective Communication", Prentice Hall
2. Quirk, Randolph. and Sidney, Greenbaum., "A University Grammar of English", Pearson Education
3. Ashraf, M. Rizvi, "Effective Technical Communication", McGraw Hill
4. Bovee, Courtland L. and John, V. Thill., "Business Communication Today", Pearson Education

Paper Title : Applied Chemistry

Paper Code : CH201 / CH101

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objective: To teach fundamentals of basic chemical sciences essential for the development of new technologies to all branches of engineering.

Details of the Course:

S. No.	Contents	Contact hrs
PART A		
1.	THERMODYNAMICS: Review of objectives and limitations of chemical thermodynamics, State functions, Thermodynamic equilibrium, work, heat, internal energy, enthalpy, heat capacity. Zeroth law of thermodynamics, First law of thermodynamics Reversible, isothermal and adiabatic expansion & compression of an ideal gas. Irreversible isothermal and adiabatic expansion of an ideal gas. Carnot cycle and efficiency of reversible engines, Enthalpy change and its measurement. Flame temperature, Second and third law of thermodynamics. Concept of entropy. Gibb's and Helmholtz equations. Simple numerical for calculating w , q , ΔE , ΔH and entropy.	10
2.	CATALYSIS: Catalysis and general characteristics of a catalytic reactions, homogeneous catalysis, kinetics of acid, base and enzyme catalysis – Michaelis-Menten equations. Heterogeneous catalysis. Application of catalysis for industrially important processes—hydrogenation (Wilkinson's catalyst), hydroformylation, acetic acid process and Wacker process.	6
3.	ELECTROCHEMISTRY: Introduction to electrochemistry, types of electrodes, Ion selective electrodes, Reference electrodes, Fuel cells (hydrogen-oxygen, propane-oxygen, methanol-oxygen fuel cells), Corrosion: Types of corrosion, dry and wet corrosion and their mechanisms, types of electrochemical corrosion (galvanic, pitting, waterline, differential aeration, soil, microbiological, inter-granular, stress corrosion), Factors influencing corrosion, Prevention of corrosion.	8
PART B		
4.	POLYMER CHEMISTRY: Classification of polymers, Mechanism and methods of polymerisation, idea of number average and weight average molecular masses of polymers, preparation, properties and uses of polystyrene, polyester, polyamide, phenol-formaldehyde, silicones and epoxy resins,	5
5.	SPECTROSCOPY: UV- Introduction, Lambert-Beer's Law, selection rules, electronic transitions, Application to simple organic molecules (auxochrome, chromophore), effect of conjugation and solvent on	10

	transition of organic molecules, Woodward-Fieser Rules for calculating λ_{\max} for dienes. IR- Introduction, Principle of IR spectroscopy-Fundamental vibrations, Application to simple organic molecules (effect of masses of atoms, bond strength, nature of substituent, hydrogen bonding on IR frequency), sample preparation for IR.	
6.	COORDINATION CHEMISTRY: Introduction, Crystal Field Theory, Splitting of octahedral, tetrahedral and square planar complexes, crystal field stabilization energies of octahedral and tetrahedral complexes and its applications.	6

Books suggested:

1. Organic Chemistry by Joseph M. Hornback Brooke/Cole Publishing Company U.S.A.
2. Atkins's Physical Chemistry by Peter Atkins, Julio de Paula, 7th Edition, Oxford University Press.
3. Concise Inorganic Chemistry Vth Edition J D Lee 2003 (Chapman & Hall).
4. A Textbook of Engineering Chemistry by Shashi Chawla, Dhanpat Rai & Co. Pvt. Ltd.
5. Introductory Polymer Chemistry by G.S. Mishra, John Wiley & Sons, New York, 1993.
6. Puri, Sharma and Pathania : Principles of Physical Chemistry, W.H. Freeman & Co, 2008.
7. D. S. Pavia, G.M. Lasmpman and G.S. Kriz : Introduction to spectroscopy, 4th Edition, Thomson learning, Indian Edition 2008.
8. Basic Inorganic Chemistry by F.A. Cotton, G. Wilkinson and P.L. Gaus, 3rd Ed., John Wiley & Sons.

Practicals:

Instruction for Students: The candidate will be attending a laboratory session of two hours weekly and has to perform any eight experiments.

- Volumetric analysis: iodometric titrations, complexometric titrations, Acid-base titrations
- Analysis of lubricants: Viscosity/surface tension/saponification value/acid value
- Instrumental techniques for chemical analysis: conductometry, potentiometry, UV-visible/IR spectrophotometer.
- Preparation of few organic compounds/inorganic complexes/polymer

Books Recommended:

1. A. I. Vogel : A textbook of Quantitative Inorganic Analysis, 2000, Published by Longman Gp. Ltd, 4th edition.
2. Shashi Chawla: Essentials of Experimental Engineering Chemistry. Published by Dhanpat Rai & Co. Delhi (2001).
3. Vogel's text book of quantitative chemical analysis, 6th Ed by J. Mendham, R. C. Denny, J. D. Barnes and M. J. K. Thomas, Pearson Education.

Paper Title: Workshop Practice

Paper Code: ME 203 / ME103

Time of examination: 3hrs.

Internal Assessment : 50

Course Prerequisites: Basic Workshop Practices

**Course
Objective
s(CO) :**

Student will be able to:

- 1. Know different machines, tools and equipment, Identify different Engineering materials, metals and non-metals.**
- 2. Understand different Mechanisms, Use of Machines, Tools and Equipment.**
- 3. Knowledge of basic Manufacturing Processes in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal. Smithy, Foundry and Carpentry Workshops.**

**Course
Outcome
:**

This course is designed to help students achieve the following outcomes.

- 1) Familiarity with common machines, Tools and Equipment in basic Workshop Practices.**
- 2) On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal. Smithy, Foundry and Carpentry Workshops in Engineering professions.**
- 3) Applications of Basic Workshop Practices..**

SYLLABUS

8u98

Instruction for Students: The candidate will be attending a laboratory session of three hours weekly.

Practice of basic exercises related with different shops. On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal. Smithy, Foundry and Carpentry Workshops in Engineering professions.

Welding Workshop : (Theory)Joining Processes, Welding and its Classification, Welding Processes, Fusion Welding, Pressure Welding, Electric Arc Welding, Gas Welding, Resistance Welding, Metal Inert gas Welding, Welding Joints, Welding Positions, Welding defects, Welding Applications, Basic welding design and Procedures, identification of materials,

Jobs: Butt Joint in Flat Position using SMAW.

Lap Joint using Spot Welding

Edge Joint in Horizontal Position using SMAW

Tee Joint in Flat position using SMAW

Corner Joint in vertical position using SMAW.

Defect Identification and marking.

Edge preparation and Fillet making, Tacking, Distortion identification

Electronics Workshop : To know about Soldering mechanism and techniques

Familiarity with Electronic Components / symbols

Testing of electronic components

Application of Soldering : Circuit Assembly

List of Jobs :

Practice of Soldering and de-soldering

Identification and testing of a) passive electronic components b) Active electronic components

Assembly of Regulated Power supply circuit

Electrical Workshop:

Introduction of Various Electric wirings, Wiring Systems, Electrical wiring material and fitting, different type of cables, Conduit pipe and its fitting, inspection points, switches of all types, Distribution boards, M.C.B's etc.

Electric Shock and its management.

Electric Tools: Conversance with various tools and to carry out the following:

- a) Measurement of wire sizes using SWG and micrometer**
- b) Identification of Phase and neutral in single phase supply**

Jobs:

To control a lamp with a single way switch

To control a lamp from two different places

To assemble a fluorescent lamp with its accessories

To control a lamp, fan and a three pin socket in parallel connection with single way switches

Fitting Shop:

Introduction of Fitting, different type of operations, Tools, materials, precision instruments like Vernier caliper and Micrometer etc,

Safety precautions and Practical demonstration of tools and equipments

Jobs: To make a square from MS Flat, Punching, Cutting, Filling techniques and practice, Tapping, Counter Drilling

Smithy Workshop:

Introduction of Smithy and Forging process, Tools and Equipment's, Operations, Heat Treatment processes, Advantages, Dis-advantages, Defects and Safety precautions.

Jobs: Drawing and Upsetting Practice using Open Hearth Furnace.

Cold working process practice

Heat Treatment \: Annealing and hardening process

Machine Shop : Application, Function and different parts, Operations of Lathe, Type of Cutting Tools and their materials, Drill machine Types, applications and Functions. Hacksaw machines and functions, Work Holding devices and tools, chucks, Vices, machine Vices, V Block, Measuring Instruments uses, Shaper and Milling machine Applications.

Jobs: To perform Marking, Facing, Turning, taper Turning, Grooving, Knurling, parting, Drilling, Reaming operations on lathe machine,

Hacksawing practice on Power hacksaw,

Shaping operation practice on Shaper

Carpentry Shop: Classification of Tree, Timber. Advantages and uses of Timber, Seasoning of Wood, Tools Used, Defects and Prevention of Wood,

Jobs:

Tee Joint

Cross Joint

Tenon Joint,

L Shape Joint

Practice of Wood Working Lathe

Practice on multi-purpose Planer

Foundry Shop : Introduction to Foundry, Advantages and Disadvantages of castings process, Introduction to pattern and various hand tools, Ingredients of Green sands, Various Hand Molding processes, Introduction to Casting Defects,

Jobs: Identification and uses of hand tools, Preparation of Green sand in Muller, Preparation of Sand Mould of Single piece solid pattern, Split pattern, Preparation of Green sand Core, casting of a Mould and study its defects.

Paper Title : Digital Electronics and Logic Design

Paper Code : CS203

Max (Univ. Exam) Marks : 50

Time of examination: 3hrs.

Internal Assessment : 50

Course Duration: 45 lectures of one hour each.

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objectives: The objective of this course is to provide knowledge about digital electronics circuitry.

Section A

Module 1: IC Digital Logic Families -Characteristics of digital IC.s, Transistor – Transistor Logic family, Standard TTL characteristics, Other TTL series, Open collector TTL, Wired OR/AND connection, Tristate TTL, Emitter-Coupled Logic family, ECL NOR/OR gate and its characteristics, Metal-oxide semi-conductor (MOS) family, NMOS and CMOS gates and their characteristics, CMOS transmission gate circuits .

(7)

Module 2: Simplification of Boolean Functions -Using Karnaugh map and Quine-Mccluskey methods, SOP, POS simplification, NAND and NOR implementations, other two-level implementation (AND-OR-INVERT).

(6)

Module 3: Combinational Logic Design-Design procedure, Adder : Half adder, Full adder, Serial adder, Parallel adder & Carry look-ahead adder, Subtractors : Half subtractor & Full subtractor, BCD to Excess-3 code convertor, BCD to 7-segment decoder, Parity generator and checker / . (7)

Section B

Module 4: Combinational Logic Design using MSI Circuits -Application of typical IC.s like 4-bit parallel adder (ex : 7483), Encoders (ex :74148), Multiplexers (ex: 74151, 74153, 74157) and their use in realising boolean functions, Multiplexer trees, Demultiplexer / Decoders (e.g.: 74138, 74154) and their use in realising a boolean function and demultiplexer trees, 4-bit magnitude comparator (ex:7485).

(7)

Module 5: Synchronous Sequential Logic-Analysis of clocked sequential logic, State reduction and assignment, Flip-flop excitation tables, Design procedure, Design of sequential circuits ex : 3-bit up/down counter (mod < 8), 3-bit up/down gray code counter, Serial adder.

(5)

Module 6: Counters-Dependency notation, Symbols for Decoder, Multiplexer, Flipflops, Registers, Counters, RAM. Flipflops, Asynchronous counters (mod 8 and less than 8), IC asynchronous counters (7493, 7490) and cascading, synchronous counters, binary and binary up-down counters, IC synchronous counters (74192, 74190) and cascading. (6)

Module 7: Registers-Registers and their different modes of operation SISO, SIPO, PISO, PIPO, Shift registers (7495 / 74195), bidirectional universal shift register (74194), Applications of shift registers, Time delay, Ring counter, Johnson counter, Sequence generator; Programmable Logic Devices-PLD, PLA, PAL, FPGA structures & applications.

(7)

Text Books:

1. M Morris Mano, Digital Design, 3rd Edition, 2006, PHI
2. R. P Jain, Modern Digital Electronics, Second Edition, TMH
3. Bignell &Donovan Digital Electronics, 4th Edition, 2007, Thomson Learning.

Reference Books:

1. Tocci : Digital Systems PHI , 6e, 2001
2. Uyemura : Digital Systems Design, 2003, Thomson Learning
3. Anand Kumar : Digital Integrated Electronics ,2ed 2009

Practicals:

1. To study truth tables of AND, OR, NOR, NAND, NOT and XOR Gates.
2. To verify the truth tables of RS, of JK and T Flip Flops.
3. To fabricate and test the truth table of half and full adder.
4. To design and implement a Modulo-N Counter.
5. To design and implement a Universal shift register.
6. Design and fabrication of synchronous counter
7. Design and fabrication of combinational circuits using Multiplexers
8. To convert 8 bit Digital data to Analog value using DAC.
9. To convert Analog value into 8 bit Digital data using ADC

Paper Title : OBJECT ORIENTED PROGRAMMING Paper Code : CS202 Max (Univ. Exam) Marks : 50 Internal Assessment : 50 Course Duration: 45 lectures of one hour each. Pre-requisites: Programming Fundamentals (CS101/201)	
Objectives	To understand the basic concepts of object oriented programming languages and to learn the techniques of software development in C++.
Note for Examiner	The Semester question paper of a subject will be of 50 marks having 7 questions of equal marks. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt at least two questions from each part.
SECTION-A	Hrs
1. Principles of Object Oriented Programming	2
2. Tokens, Expressions and control structures, various data types, and data structures, Variable declaration, Operators and scope of operators.	4
3. Pointers, Functions, Classes and Objects: Prototyping, referencing the variables in functions, memory allocation for classes and objects, Array of objects, pointers to member functions.	8
4. Constructors and Destructors, Operator Overloading and type conversion.	4
5. Inheritance: Derived classes, types of inheritance, and various types of classes.	5
SECTION-B	
6. Virtual functions and Polymorphism.	5
7. I/O operations on files: Classes for files, Operations on a file, file pointers.	8
8. Exception Handling and Generic programming with templates: Introduction to templates, overloading of template functions and Inheritance. Introduction to standard Template Library	9

Text Book:

1. Robert and Lafore : Turbo C++, Galgotia Publications.

References:

1. Stephan & PRAT : C++ Primer Plus, Galgotia Publications.
2. Bala Guruswamy : Object oriented programming with C++, TATA McGraw Hill
3. Ashok N. Kamthane : Object-Oriented Programming with ANSI and Turbo C++, Pearson Education.

Title	OBJECT ORIENTED PROGRAMMING (PRACTICAL)		Credits	02
Max. Marks	50		Elective	N
			Time	3 Hours
Note List	Practical should be covered based on the following directions: <ol style="list-style-type: none"> 1. Functions, Classes and Objects 2. Constructors and Destructors 3. Operator Overloading and Type Conversion 4. Inheritance and Virtual Functions 5. Files 6. Exception Handling and Generic Programming
